INTERIOR WOOD FILLER

DIRECTIONS

To fill small holes or cracks use a clean palette knife or similar utensil. Apply firmly but leave a little proud. Allow to dry and sand off any surplus. Deep holes or cracks should be filled in layers, allowing each one to dry before applying the next. A spot of water on the stopping will keep it soft in use. If too hard in the tin soften with a little warmth.

Sets firmly to bare wood, nail heads, screws, glass, fibre-glass, iron and plaster. Does not sink. Takes most stains if mixed before applying. Always try a sample area first with the appropriate finish.
